AB - NOVELTY :

Water-in-oil type emulsified hair-cosmetics, comprises cross-linked type polyether modified organo-polysiloxane polymer, silicone oil, coolant and aqueous based component.

- USE :

As water-in-oil type emulsified hair-cosmetics.

- ADVANTAGE :

The cosmetics has moderate visco-elasticity property. Hence cosmetics provides easy handling. The cosmetics provides powdery touch, freshness to hair, quickly releases water based component of internal discontinuous phase and effectively removes the greasiness in the hair.

- INORGANIC CHEMISTRY :

Preferred Components: The cosmetics further comprises non-silicone oil and cross-linked type organo-polysiloxane polymer.
